KOTAPATI VISHAL REDDY

FULL-STACK DEVELOPER INTERN CANDIDATE

vishalkotapati5@gmail.com | LinkedIn | GitHub

PROFILE

Second-year B.Tech Artificial Intelligence & Machine Learning student at Yenepoya University with hands-on project experience building full-stack applications, REST APIs, database-backed workflows, and AI-integrated features. Familiar with React, TypeScript, Python, FastAPI, PostgreSQL, and Git. Seeking a Full-Stack Developer Internship to contribute to practical web products and strengthen frontend, backend, and deployment skills.

EDUCATION

B.Tech, Artificial Intelligence & Machine Learning

Yenepoya University | Expected graduation: 2029

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Python (basic), Java (basic), SQL
Frontend	React, HTML, CSS, Vite
Backend	FastAPI, Node.js, REST APIs
Database & Tools	PostgreSQL, Prisma, SQLAlchemy, Alembic, Git, GitHub, VS Code
AI / Data	Google Gemini API, pandas, scikit-learn, model training and evaluation fundamentals

PROJECTS

BRANDSHIELD AI – AI-POWERED BRAND GOVERNANCE PLATFORM

Python, FastAPI, React, TypeScript, PostgreSQL, SQLAlchemy, Alembic, Google Gemini API | Render, Vercel

- Built a full-stack platform that checks submitted marketing content against saved brand guidelines and identifies potential compliance issues.
- Integrated Google Gemini API to generate audit summaries and findings, including severity, problematic text, and suggested corrections.
- Implemented guideline management, audit history, and a human review workflow supporting approve, reject, and request-changes decisions.
- Created REST API endpoints and PostgreSQL persistence for guidelines, audits, and review decisions.

Live demo | *Source code*

CUSTOMER SUPPORT AI

Python, pandas, scikit-learn, FastAPI

- Built a ticket-classification prototype to predict support-ticket category and priority.
- Prepared a 30-record dataset, trained classification models, and exposed predictions through a FastAPI endpoint.
- Documented the small dataset as a learning prototype requiring broader validation.

TASK MANAGER

CRUD, database integration, Git, GitHub

- Built a task-management application centered on create, read, update, and delete workflows.
- Practiced backend functionality, persistent data integration, and version control; maintained the project in a GitHub repository.

Source code

PROFILE SERVICE RELIABILITY WRAPPER

JavaScript, Node.js, AbortController

- Implemented timeout handling, retries with exponential backoff, and fallback responses for a simulated avatar service.
- Tested healthy, intermittent, slow, unavailable, and bad-request scenarios to verify graceful failure handling.

AREAS OF INTEREST

Full-stack web development, REST API design, database-backed applications, AI integration, and reliable backend services.
